ABOUT ME

Im a technology-driven and detail-oriented individual currently building my path as a full stack developer. I have a strong technical foundation supported by my Advanced Technical Degree in Programming from the National Technological University (UTN). During my studies, I developed several academic projects that allowed me to apply my knowledge in Java (Eclipse, NetBeans), C#, .NET (WinForms, WebAPI, WCF), and SQL Server. I also expanded my skill set with specialized courses in Angular, React, and Node.js, strengthening my capabilities in modern web development.

These academic projects exposed me to real-world challenges, helped me adopt good programming practices, and enabled me to build functional end-to-end solutions. Im highly motivated to continue growing professionally, learning new technologies, and contributing value through efficient, well-designed, and results-oriented solutions.

WORK EXPERIENCE

Cencosud
Logistics Receptionist & Warehouse Supervisor

1994 – Present

Responsibilities:
